- management and delivery products and processes to implement, and how to implement them; and
- applying these key considerations and processes to the system design problem
 with the assistance of a framework showing basic content management and
 delivery element relationships, whereby such a solution to the system design
 problem is produced.
- 2. (Amended) The method of claim 1 wherein the solution to the system design problem includes facilities whereby coherent sales, training, electronic learning or marketing campaigns are efficiently generated to web-based and other clients.
- 3. (Amended) The method of claim 2 wherein the solution to the system design problem includes facilities whereby transaction processing and execution are monitored and captured for adding data to a target customer's profile.
- 5. (Amended) The method of claim 4 wherein the formalized framework is used to guide discussions about desired capabilities of the desired content management and delivery system.
- 6. (Amended) The method of claim 5 wherein through the use of this formalized framework and associated processes and considerations, a meaning of content management is developed and a set of process considerations required for this definition of content management is provided.
- 7. (Amended) The method of claim 5 wherein through the use of this formalized framework and associated processes and considerations, an assessment of business capabilities to be supported is made.

- 8. (Amended) The method of claim 7 wherein through the use f this formalized framework and associated processes and considerations, an effective design solution is achieved including an assessment of available products and services.
- 9. (Amended) A system for use in designing a coordinated content management and delivery system comprising:

 \mathcal{A}^{P}

May the

- a first logic mechanism for determining key considerations related to a client environment;
- a second logic mechanism for determining key processes for use in developing a solution to a system design problem, the system design problem being the determination of what content management and delivery products and processes to implement, and how to implement them; and
- applying these key considerations and processes to the system design problem with the assistance of a framework showing basic content management and delivery element relationships, whereby such a solution to the system design problem is produced.
- 10. (Amended) The system of claim 9 wherein the solution to the system design problem includes computer based facilities whereby coherent sales, training, electronic learning or marketing campaigns are efficiently generated to web-based and other clients.
- 11. (Amended) The method of claim 10 wherein the solution to the system design problem includes computer based facilities whereby transaction processing and execution are monitored and captured for adding data to a target customer's profile.
- 13. (Amended) The system of claim 12 wherein the formalized framework is used to guide discussions about desired capabilities of the desired content management and delivery system.
